

The FCC should not be interfering with what is heard on XM Radio in regards to local weather and traffic reports. They are most useful and valuable to listeners in those areas. XM seeks to compete fairly with AM and FM, and any inhibition is merely a strong-handed attempt to thwart capitalism and free enterprise.

Just a reminder, Satellite TV offers the same type of local weather forecasts for different cities without threats from broadcast TV and other media firms.

I respectfully urge the FCC to REJECT NAB's Petition 04-160. This country prides itself on pure capitalism and free commerce; no government agency should try to take that away, unless they want the US of A to be socialist or communist. Thank you for reading my and all other XM listeners' comments.
